

Dinesh Choudhary

8+ YOE | Senior Software Engineer (Coupang)

+91 7206306609 | dineshchoudhary9997@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

Skills

Languages & Core: Java, Python, C++
AI / GenAI: Generative AI, LLMs, Agentic AI, RAG, Function/Tool Calling, LangChain, MCP
Data & Streaming: MySQL, MongoDB, Redis, Elasticsearch, Spark, Kafka
Frameworks: Spring Boot, React / Next.js, Lightning Web Components (LWC)
Cloud & Infra: AWS (EC2, S3), Azure, Docker, Kubernetes, Terraform, Grafana, Jenkins

Professional Experience

Coupang

May 2026 – Present

Senior Software Engineer – First and Middle Mile Transportation

Bangalore, India

- Architected and built an **LLM-powered OnCall Engine** adopted across multiple teams, handling **10K+ executions/month** by orchestrating MCP integrations across logs, Grafana, and Git; auto-generated root-cause analysis and full incident context directly in Slack, cutting on-call resolution time by roughly **15 minutes per incident**.
- Built a self-updating **Confluence knowledge base** and query-routing engine within the OnCall Engine, automatically routing other teams' on-call queries to the correct KB.
- Architected and led development of **Alice**, a new supplier pickup routing optimization service built from the ground up, currently handling **30K+ orders** and designed to scale well beyond; supports **VRP with heterogeneous fleets and time windows** along with pluggable alternate planning models (e.g., vendor-based pickups) beyond classical VRP.
- Leading the **re-architecture design** of the milkrun process, driving migration away from a legacy service to improve transportation planning efficiency and middle-mile throughput.
- Built a **task scheduling engine** to generate and orchestrate tasks across transportation stages, from first mile to last mile.
- Re-architected the **invoice printing service** for disaster recovery, scaling it to absorb **2x Coupang's total transportation volume** during an availability-zone outage without service degradation.

Salesforce

Aug 2021 – May 2025

Senior Member of Technical Staff / Member of Technical Staff

Hyderabad, India

- Designed and implemented observability and monitoring solutions on AWS for **Spiff**, achieving 20% cost savings and improved visibility for internal platforms.
- Mentored junior and other engineers** on the team, providing technical guidance and design review across projects.
- Designed and developed **Groups functionality** in Spiff, enabling multiple people from different teams to be grouped together.
- Built a drag-and-drop builder using **Lightning Web Components** (frontend) and **Java** (backend), including a custom exercise feature enabling users to define exercises with custom error-handling logic.

Flipkart

Jul 2018 – Aug 2021

Software Development Engineer I / II

Bengaluru, India

- Led development of tools for the **User Insights Team**, providing analytics on user behavior that boosted user engagement metrics by 10%.
- Built a client library to search for lookalike users based on seed information, **reducing search latency by 40%** through optimization techniques.
- Drove technical design decisions** across the **Warehouse and User Insights teams**, solving supply chain problems through system design and enhancing critical supply chain business features.

Projects

Algorithmic Trading Platform

2024

- Architected a **multi-strategy algorithmic trading platform** for NSE options and equity, with a pluggable strategy framework allowing independent strategies to be configured, backtested, and deployed to live execution.
- Built an **LLM-based signal generation pipeline** that analyzes news and market data to surface trading signals, feeding them into the strategy framework alongside traditional quantitative signals.
- Full-stack system with a **Python** backend and a **React/Next.js** dashboard for strategy configuration, monitoring, and backtesting results; hosted on AWS for scalability.

Education

National Institute of Technology (NIT), Kurukshetra

2014 – 2018

B.Tech in Computer Science
